

KIX-12

12" PASSIVE SUBWOOFER

Exceptional Audio Performance

Description

The KIX-12 is an ultra-compact direct radiating sub-bass system designed to extend the bandwidth and increase the headroom of full-range loudspeaker models. It features a very efficient 12" (300mm) long-throw bass driver with a high power 3" (75mm) voice coil and generously-sized reflex ports for low noise, high power operation.

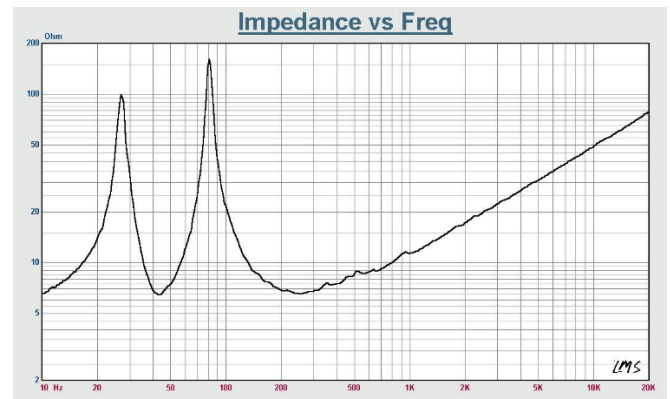

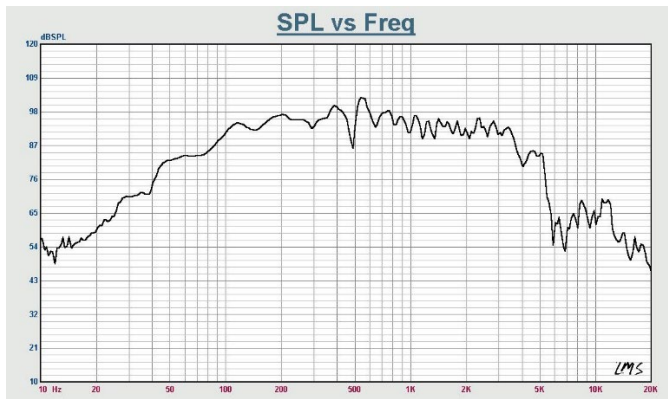

With a response of 48Hz-150Hz \pm 3dB, the ultra-compact size of the KIX-12 makes it an ideal partner for Byford Audio's CLUB series systems where space is at a premium or where the subwoofers need to be hidden. The enclosure is constructed from birch plywood and has an impact-resistant finish, while the driver is protected by a rigid perforated steel grille, which is pre-curved to withstand physical damage.

Features

- Ultra-Compact, single driver, direct radiating subwoofer
- 12" (300mm) driver with 3" (75mm) voice coil
- Water resistant cone
- Large ports for reduced air noise
- Perforated steel grille
- Black standard colour option

BYFORD AUDIO
